DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1-3, 8-11 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Mower '688.

Mower discloses switch means comprising flip-flops 30, 34 and 53.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4-7 and 12-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mower '688 in view of Silvian '583.

Mower shows all of the claimed features except for providing a ground return path.

Silvian teaches it is typical for the return path of a pacer to be connected to an electrical common or ground of the pacer metal enclosure. The case, in turn, makes contact with the body tissue and/or fluids.

One of ordinary skill in the art would have found it obvious to use the ground teaching of Silvian to provide a fourth terminal to ground to provide a return path for the electrical therapy provided by the ventricular and atrial pacing electrodes because a fourth electrode serves a similar function to the metal enclosure which is in contact with body tissue.
